| Coating unit | **CC800® HiPIMS**<br>**CC800® ML**<br>**CC800® XL** |

**Online training**
Development and optimization of coating processes for your CC800® HiPIMS.
From recipe definition to series production capability.

**Training objective**
This online training course provides in-depth, practical know-how for the independent development and adaptation of existing and new coating processes to customer-specific applications on your CC800®HiPIMS.
Participants learn to understand existing coating recipes, analyze them in a targeted manner, and modify them as needed.
The focus is explicitly on application-oriented knowledge transfer, tried-and-tested procedures, and realistic examples from industrial coating practice.

In order to make the training as efficient and targeted as possible, it is ideal if the customer submits a list of questions before the first training session. This allows the content to be optimally prepared and tailored precisely to individual requirements.
This approach has already proven very successful with other customers and works extremely well in practice.
