Specifications

Process step	radiate Finishing
Coating procedure	Pretreatment Follow up treatment
Type	CBMS 20
Net weight	270 kg
measurement (LxWxH)	Dimensions plant: 550 x 800 x 1700 mm min. footprint: 1000 x 1000 mm
Connected Load (KW)	2,7
Ampere	25 A

A constantly high blasting medium quality is guaranteed by the use of the separator. It separates the used blasting medium (e.g. high-grade corundum) from the blasting liquid in order to maintain the blasting quality at a constantly high level through targeted refilling of new blasting medium. In conjunction with the blast machine, the Turbo Separator operates almost fully automatically. It is installed near the blast machine. From the wet blasting system, the blasting liquid runs together with the blasting medium into the separator. There, the used blasting medium is separated. Refilling of the used blasting medium can be done quickly and accurately.

The UL standards are product safety standards for the US market developed by Underwriters Laboratories (UL).
