

Stereomicroscope Stemi 508

Item no. 33946

Stemi 508 with its apochromatic optics offers you to capture images with excellent image contrast as well as color accuracy.

Specifications

Net weight	3,6 kg
Type	508
Coating procedure	Pretreatment
Process step	Incoming inspection
Test method	Microscopy
	Cluster analysis

The mechanics are designed for a heavy workload. With the large object field of up to 36 mm, you always have an overview of your specimen. The 8:1 zoom allows magnification of details up to 50x. Includes segmentable LED ringlight for shadow-free ring illumination and oblique segment illumination: semicircle, quarter circle, double spot & 24 inch monitor.

Stemi 508 is more ergonomic than any other Greenough principle stereo microscope. Thanks to its small viewing angle of 35°, you will still adopt a relaxed posture even after many hours of work.

Observe and document your specimens exactly as they are with Stemi 508: detailed, focused and free of distortion or color fringing. Stemi 508 is your robust all-rounder for daily laboratory work and industrial inspections.
