Operator training for your CC800® system

Item no. 9645

Safe. Efficient. Competent.

Your training for optimal plant operation!

Our experienced service technicians offer training at our coating centers in Germany, the U.S., China, and Japan, as well as on-site training at your own production facility. Of course, this range of services is also available as online training.

You know our technology, but your new employees are not familiar with it? Talk to us!

Revised 2026 - subject to technical modifications

CemeCon has developed a practical training module for users of the CC800® coating system, focusing on safe and efficient operation, system preparation, software operation, and quality control. The training provides practical know-how, increases confidence in day-to-day operations, enables structured troubleshooting, and thus contributes to reduced downtime, higher machine availability, and more efficient operation.

In addition to the training material, you will receive a detailed operator's manual for operating your coating system.

Training location: by arrangement
Instructor: qualified CemeCon service technician
Duration: depending on operator qualifications
Language: German or English, to be selected in advance
Cost: by arrangement

The following contents are covered in the training:

- Fundamentals of PVD coating technology
- Operating principle of the CC800®, CC800® components
- System preparation
- System operation (APC/IPC)
- DataView basics
- Process handling
- Structure and basics of coating processes
- Troubleshooting / leak detection
- Target replacement
- Quality control (deposition rate measurement, adhesion testing, etc.)

Revised 2026 - subject to technical modifications
