Specifications

CemeCon has developed a training program to make users of CemeCon technologies more aware of the processes involved in operating our equipment and systems. Operator training is the perfect start to deepen knowledge of the CC800® coating system, to learn safe operating techniques, and to discover how the coating system, along with its peripherals, can be optimally used to coat precision tools. The result is efficient operation with reduced costs and higher machine availability.

In addition to the training material, you will receive a detailed operator's manual for operating your coating system.

Training location: by arrangement

Instructor: qualified CemeCon service technician

Duration: depending on operator qualifications

Language: German or English, to be selected in advance

Cost: by arrangement
